CHANGE

POSITIVE EXPOSURE: CELEBRATING THE HUMANITY OF MEDICINE

Welcome to Change How You See, See How You Change, a photography exhibition that redefines how we see medicine – not just as science, but as a deeply human experience. Created in collaboration with local participants and University of Louisville health sciences students, this portrait collection invites you to see the person behind the diagnosis - celebrating their joy, strength, and uniqueness. Each image tells a story, reminding us that every patient is more than their condition; they are individuals with rich lives, emotions, and identities that deserve recognition. As you explore these portraits, we invite you to reflect on the power of empathy in healthcare and the importance of genuinely seeing, listening, and understanding the people we care for.

Through partnership with POSITIVE EXPOSURE, the University of Louisville Health Sciences Office of Health Equity and Engagement, the Kornhauser Health Sciences Library, and the School of Medicine Department of Pediatrics, this exhibition aims to remind us that we all share fundamental human experiences. By embracing these experiences, we enhance our understanding of compassion in medicine and within the communities we serve.

Please scan the QR code to explore behind-the-scenes moments and learn more about the people and process involved in this exhibition.

**POSITIVE
EXPOSURE**

POSITIVE EXPOSURE utilizes the arts and advocacy to create a more inclusive world, celebrating our shared humanity. POSITIVE EXPOSURE collaborates internationally with nonprofit organizations, hospitals, medical schools, educational institutions, museums, galleries, advocacy organizations, and communities to effect a sea-change in societal attitudes towards individuals and communities at risk of stigma and exclusion.
